

# PolyCycle™ Plant Protector Assembly Guide

## Step 1

Unclip the handles and remove the PolyCycle™ Plant Protector.

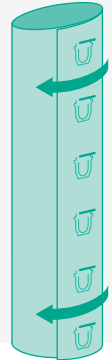

## Step 2

Push through the air holes along the perforated edge in the centre of the plant protector.

## Step 3

Roll up the PolyCycle™ Plant Protector to form a cylinder shape, ensure the tabs and insets are aligned together.

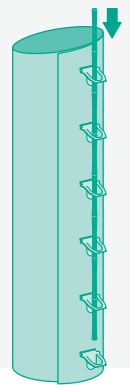

## Step 4

Insert the middle tabs through their corresponding insets first, working your way outwards to the top and bottom.

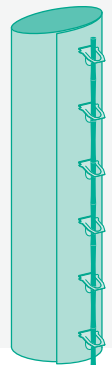

## Step 5

Thread the stake through the holes in the tabs ensuring it goes through all the tab holes.

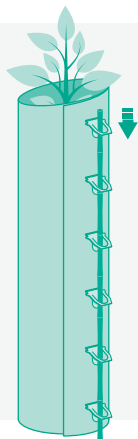

## Step 6

Ensure the stake goes all the way to the bottom.

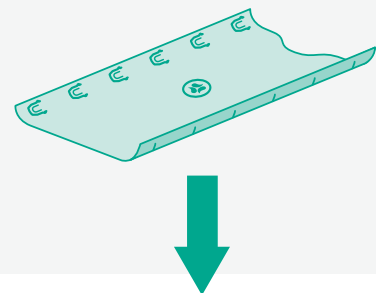

## Step 7

Your PolyCycle™ Plant Protector is ready to be placed over your plant. You can then tap the stakes into the ground.

## Step 8

At its end of use you can reuse your PolyCycle™ Plant Protector or recycle it. Check with your local recycling provider, or return to EPL where we will recycle them into new PolyCycle™ Plant Protectors.

At EPL we are committed to improving our product stewardship. That's why our PolyCycle™ Plant Protectors are manufactured from recycled and recyclable material to help minimise waste. To learn about our sustainable product range visit our website.
